

Digital Camera Adapter for Microscopes

The KL-MVP connects almost any digital camera with threaded lenses to almost any microscopes. It also works for SLR Cameras. We carry dozens of attachment kits to fit hundreds of popular digital cameras and we update them regularly. When it is time to upgrade to a new camera you will just need a new camera tube and your KL- MVP will not become obsolete. Cameras like Nikon CoolPix , most Canon cameras, also the newer ones like the A650, A720, G7, G9 and cameras from Fuji, HP, Kodak, Leica, Minolta, Nikon, Olympus, Panasonic, Pentax, Sharp, Sony, Toshiba and many others can be connected to a microscope. There are also adapters for SLR cameras from Canon, Fuji, Kodak, Konica, Minolta, Nikon, Olympus, Pentax. Camcorders with threads from 30 mm to 62 mm can be connected as well. The kit comes in a custom storage case. The KL-MVP kit includes adapters to fit microscopes with C-Mount, C/S-mount, 23mm eyepiece and 30mm eyepiece.

You will find an overview about the range of digital cameras, which can be connected on our Internet pages under www.klughammer.de.
