

RGB LED Ringlight

Ultra bright illumination

The high intensity RGB LED ringlight capable of single red illumination 592 nm, a single green illumination of 520 to 535 nm and a blue illumination of 464 to 475 nm as well as a separate UV ringlight is available from Klughammer Industrie GmbH, Germany. It provides intense, shadow-free and homogeneous illumination. The colored LEDs may be switched on and off independently. The system enables singular intensity control of all three wavelengths plus you can merge all three wavelengths together to get mixed variations to perform and excite biological and material science specimens in fluorescence, probably the only system of its kind for those specialist requirements. Different ring diameters are available.

This press release may be published free of charge immediately.
